技术规格

Background:	This gene encodes a protein containing tetratricopeptide repeats which are thought to be involved in protein-protein interactions. The encoded protein is also a minor histocompatibility antigen which may induce graft rejection of male stem cell grafts. A large number of alternatively spliced transcripts have been observed for this gene, but the full length nature of some of these variants has not been determined.
Applications:	ELISA, IHC
Name of antibody:	UTY
Immunogen:	Full length fusion protein

Full name:	ubiquitously transcribed tetratricopeptide repeat c ontaining, Y-linked
